ISCRIZIONE ALBO N° 919

1. Verifica delle interferenze con la CSP "Carta di Sintesi della Pericolosità" del PUP

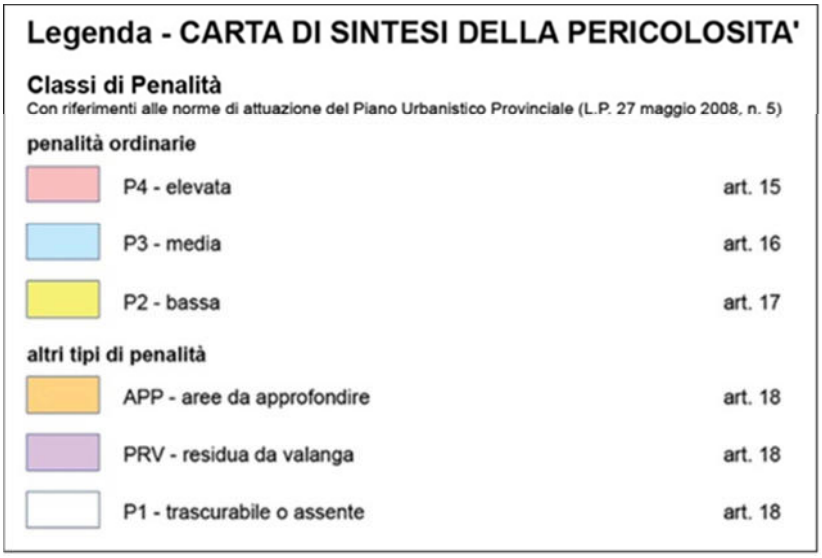

"Il Piano urbanistico provinciale, approvato nel 2008, ha introdotto la Carta di sintesi della pericolosità come strumento di armonizzazione delle diverse discipline tecniche volte alla classificazione del pericolo idrogeologico, per fornire un quadro unitario per la trasformazione urbanistica ed edilizia del territorio rispetto al tema del pericolo.

La Giunta provinciale con deliberazione n. 1317 del 4 settembre 2020 ha approvato la Carta di sintesi della pericolosità (CSP), comprensiva del primo aggiornamento dello stralcio relativo al territorio del Comune di Trento, del Comune di Caldonazzo e dei Comuni di Aldeno, Cimone, Garniga Terme nonché al territorio dei comuni compresi nella Comunità Rotaliana-Königsberg.

Con la medesima delibera (allegato C) ha approvato il documento di "Indicazioni e precisazioni per l'applicazione delle disposizioni concernenti le aree con penalità elevate medie o basse e le aree con altri tipi di penalità", rivisto rispetto alla versione vigente sulla base della prima applicazione del predetto stralcio della Carta di sintesi della pericolosità.

La Carta di sintesi della pericolosità e il primo aggiornamento dello stralcio relativo al territorio del Comune di Trento e dei Comuni di Aldeno, Cimone, Garniga Terme, del Comune di Caldonazzo e al territorio dei comuni compresi nella Comunità Rotaliana-Königsberg, è entrata in vigore il 2 ottobre 2020, giorno successivo alla pubblicazione della deliberazione nel Bollettino ufficiale della Regione."1

L'allegato C della deliberazione n. 1317 del 4 settembre 2020, al paragrafo 8.3 Approvazione degli strumenti urbanistici, dispone che il servizio urbanistica della PAT acquisisca, mediante apposita conferenza di servizi, i pareri delle strutture competenti rispetto alla verifica preventiva della compatibilità delle nuove previsioni urbanistiche sotto il profilo idrogeologico.

Estratto legenda della CSP

Come evidenziato negli estratti cartografici e dall'approfondimento eseguito nel presente paragrafo, all'interno del territorio del Comune di Segonzano è presente un sistema variegato di criticità geologiche e idrogeologiche. Nonostante la presenza di penalità diffuse, se si esclude la zona di ingresso a valle del parco delle Piramidi, la Variante al PRG non insiste su aree particolarmente penalizzate.

Le penalità superiori a P2, presenti nell'insieme delle varianti ricomprese tra la n. S.001 e la n. S.028, incidono su aree che la Variante al PRG, in forza dell'applicazione dell'art. 45, comma 4 della L.P. n. 15/2015, rende inedificabili.

Le varianti che introducono nuovi lotti residenziali destinati alla prima casa sono state profondamente riviste in sede di elaborazione del progetto per l'adozione definitiva. Come evidenziato nel proseguo della presente relazione, sono state stralciate le varianti 005, 006 e, soprattutto, la variante 019. Per quanto riguarda invece la variante n. 18, relativa a una nuova area residenziale destinata alla prima casa, la stessa è supportata dallo specifico studio di compatibilità, a cui si rimanda per gli opportuni approfondimenti e che viene espressamente richiamato nel testo delle NTA al comma 5 dell'art. 60.

Sono state inoltre oggetto di stralcio:

- le varianti n. 65 e n. 67 (in particolare la n. 65, considerata problematica sotto il profilo geologico);
- le varianti n. 73 e n. 87;
- le varianti 95, 96, 97 e 98 afferenti al parco delle Piramidi di Segonzano, l'ambito del quale viene interamente riportato alla disciplina vigente.

Come evidenziato gli insediamenti storci sono interessati da modifiche puntuali. Se si escludono le varianti dalla n.CS.09 alla n.CS.89, che modificano la disciplina relativa alla categoria d'intervento R2, ammettendo una pluralità di interventi su manufatti esistenti con la finalità di favorirne il recupero e la variante n.cS.01, che risolve un incongruenza grafica, generata dall'errata classificazione degli spazi aperti dell'insediamento storico, le varianti che insistono sulla modifica della classificazione dell'insediamento no produco interferenze rispetto alle classi di penalità della CSP. La variante n. CS.05 produce una modifica alla perimetrazione dell'insediamento storico di Quaras a comprendere parte del manufatto storico del cimitero.

3. Varianti introdotte per l'adozione definitiva

Con riferimento alle varianti generate dall'accoglimento delle osservazioni pervenute durante il periodo di deposito del progetto adottato preliminarmente dal Consiglio Comunale (OSS. XX), si evidenzia l'interferenza con penalità superiori al P2 nel caso dell'OSS. 22.1, la quale prevede lo stralcio di una previsione di viabilità in corrispondenza del confine comunale tra il C.C. Segonzano e il C.C Sevignano. Trattandosi di una viabilità di fatto inesistente, si riporta la destinazione urbanistica a bosco, riducendo così i livelli di esposizione alla pericolosità.

Nel caso delle varianti relative alle osservazioni 22.3, 22.6 e 22.7, si tratta dell'accoglimento di rettifiche cartografiche volte ad adeguare il PRG allo stato di fatto dei luoghi; tali previsioni sono riconducibili a meri errori di rappresentazione della cartografia precedente.

L'accoglimento delle richieste di approfondimento contenute nel verbale della Conferenza di pianificazione ha portato allo stralcio di alcune varianti proposte in prima adozione, in quanto ritenute problematiche sotto il profilo della sicurezza idrogeologica. Nello specifico si tratta:

- delle varianti PAT.01 e PAT.02, relative allo stralcio delle previsioni introdotte in

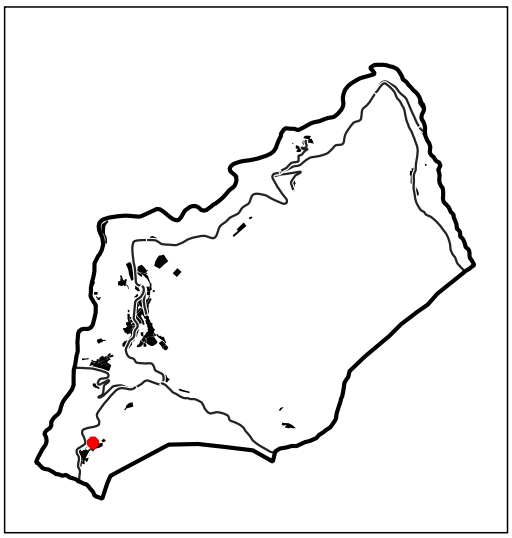

adozione preliminare con le varianti n. 05 e n. 06;

- della variante PAT.03, relativa allo stralcio dell'area residenziale precedentemente introdotta con la variante n. 19;
- della variante PAT.04, accorpata alla variante n. 72, le cui criticità sollevate sono state significativamente ridimensionate;
- della variante PAT.09, relativa allo stralcio di tutte le previsioni riguardanti il parco delle Piramidi di Segonzano;
- della variante PAT.18, volta all'inserimento di uno specifico riferimento normativo volto a disciplinare gli interventi sull'area.

Le varianti relative alla rettifica cartografica segnalate dall'Ufficio Tecnico sono finalizzate alla corretta rappresentazione dei tematismi del PRG, con particolare riferimento al sistema infrastrutturale.
